A. Latar Belakang

Berkembangnya teknologi membawa dampak positif pada segala bidang, terutama bagi kehidupan sehari-hari. Hampir setiap aspek kehidupan saat ini berkaitan dengan teknologi. Seperti yang diketahui pada saat ini banyak bermunculan aplikasi yang dibangun oleh perusahaan rintisan dengan tujuan untuk memudahkan pekerjaan sehari-hari. Beberapa aplikasi yang kita ketahui seperti aplikasi penyedia transportasi online, penjualan online, pengantaran makanan dan sebagainya.

Barang elektronik seperti televisi, kulkas, ponsel, dan lain-lain juga menjadi salah satu hal yang penting bagi kehidupan sehari-hari. Begitu juga mobil maupun motor sebagai sarana transportasi yang pasti akan selalu dibutuhkan oleh setiap orang untuk menunjang segala aktivitas. Namun apabila terjadi kerusakan dengan barang-barang tersebut tentu dapat menghambat aktivitas dan pekerjaan kita. Seringkali beberapa orang merasa kebingungan karena tidak tahu bagaimana cara memperbaiki kerusakan tersebut dan kesulitan dalam mencari bengkel / teknisi.

Oleh sebab itu penulis menghadirkan solusi untuk permasalahan tersebut. Penulis membangun sebuah aplikasi berbasis web untuk sebuah bengkel agar masyarakat dapat menemukan jasa reparasi untuk barang-barang elektronik maupun kendaraan dengan lebih cepat. Dengan adanya aplikasi ini diharapkan dapat memberi kemudahan pada masyarakat untuk melakukan servis barang. Berdasarkan uraian dan ketentuan di atas, maka hasil perancangan dituangkan dalam bentuk rancangan aplikasi dengan judul " PEMBUATAN APLIKASI EREPAIR BERBASIS WEBSITE ".

B. Dasar Permasalahan

1. Kesulitan seseorang untuk mencari tempat servis kendaraan dan barang elektronik. Maka dari itu, kami membuat web ini agar memudahkan seseorang untuk melakukan servis dengan adanya fitur antar-jemput. Namun web ini dibatasi hanya untuk wilayah Surabaya.
2. Tidak adanya sistem yang menghimpun dan mengelola data.
3. Menghindari kesalahan dalam penginputan data.
4. Kurang efektifnya proses pengelolaan data jika dilakukan secara manual.

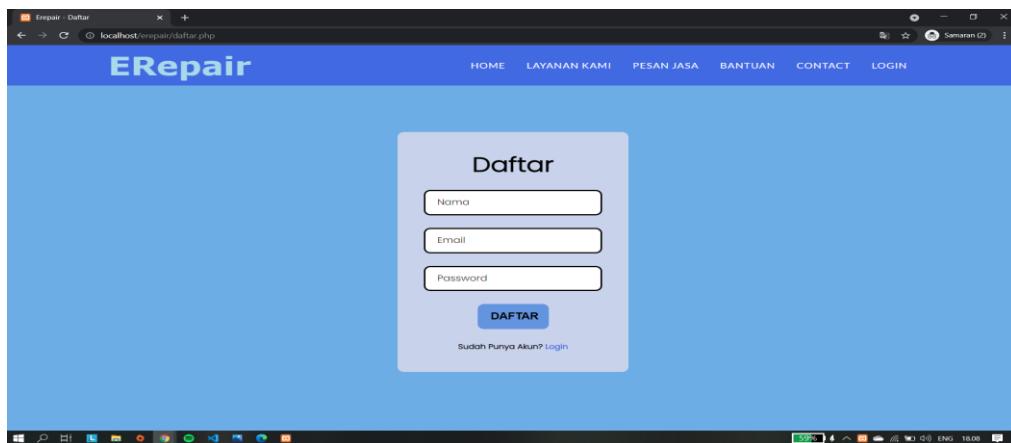

C. Rasionalisasi

ERepair adalah sistem layanan berbasis Website yang berfungsi untuk memberikan informasi mengenai jasa perbaikan barang- barang elektronik serta kendaraan. Layanan ini dapat memudahkan pemilik bengkel servis dalam memperoleh pelanggan. Keutamaan dari website ini yaitu memberikan tempat kepada pemilik bengkel serta pelanggan untuk bertransaksi satu sama lain.

The screenshot shows the Visual Studio Code interface with the file "detail.css" open. The Explorer sidebar on the left shows a project structure under "EREPAIR/admin/css" containing files like login.css, style.css, and detail.css. The code editor on the right displays the CSS for "detail.css". The CSS defines a wrapper for the title area, setting a background color (#a1eaf8), padding (0 10px), and a max-width of 500px. It also styles the title text with a font size of 30px, weight of 700, and a margin-bottom of 25px.

The screenshot shows the Visual Studio Code interface with the 'daftar.php' file open. The code handles user registration by checking if the 'register' function returns a value greater than 0. If true, it displays a success message via JavaScript alert. Otherwise, it outputs the MySQL error. The page title is set to 'Daftar Admin'. The form contains fields for username and password, and a submit button labeled 'Daftar'.

The screenshot shows the Visual Studio Code interface with the 'daftarpemesanan.php' file open. The code starts a session and connects to a MySQL database named 'erepair'. It then defines a Bootstrap-based navigation bar with links for 'Daftar Jasa' (which is the current page), 'Daftar Pemesanan' (which is active), and 'Logout'. Below the navigation bar, there is a heading 'Daftar Pemesanan' and a table with three columns: 'Id', 'Nama Pemesan', and 'Id Pemesan'.
